

IMPORTANT HOW TO MEASURE FOR YOUR COLLAR.

Measuring a collar

If you have a very fidgety dog and are unable to measure neck circumference easily sometimes you can measure a previous collar.

When doing this please measure from the fabric length where the buckle folds to the tip of the collar end. Please see.

(In this image I would expect this to fit comfortably on and 20/21/22 inch neck).

We usually want to avoid those last holes.

If measuring collar length please ensure the collar fits your dog and that the dog is not using the end holes of the current collar.

Measuring the Neck

When measuring your dogs neck circumference I recommend a flat tape or a piece of string.

Ensure the tape sits comfortably around your dogs neck where your collar sits usually lower down the neck and the tape is tight (usually allowing for 2 finger width beneath the tape).

Once you have the measurement please let me know the EXACT neck circumference. I will usually add 2 inch holes either side of the circumference to allow for a comfortable fit.

The dog in the imagine has a 21 inch neck. Collar holes would be to 19, 20, 21, 22 and 23 inches. Totally collar length I would expect to be 24 inches from buckle fold to tip.
